Project Name: Import data using Transform Maps

Project Design Phase

Problem–Solution Fit

Problem / Need	Current situation evidenced by project	Proposed response	Fit / expected value
Employee data is maintained externally	Employee data is supplied in a spreadsheet with Employee ID, Name, Email, Department and Location.	Use ServiceNow Load Data to bring the spreadsheet into an Import Set.	Creates a defined path from source data into ServiceNow.
Imported data needs transformation	The project is specifically titled Import data using Transform Maps.	Use a Transform Map to map source fields to the employee target table.	Makes the import repeatable and structured.
Users need to verify imported records	Employee Tests list shows Employee ID, Employee Name, Department, Email and Location.	Review target records after transformation.	Supports validation of the imported employee data.
Users need visibility into imported data	Reports and Employee Analytics Dashboard are shown.	Use reports and dashboard views for department, location and employee-list analysis.	Makes imported data easier to inspect and analyze.
Import execution needs traceability	Transform History displays totals, inserts, updates, ignored, skipped and errors.	Use Transform History to review each import execution.	Provides operational visibility into the import result.

Problem–Solution Fit Statement

For users who need to move employee spreadsheet data into ServiceNow, the proposed solution uses Load Data, an Import Set and Transform Map to transform and store employee records in the Employee Tests table, followed by reports/dashboard views for validation and analysis.

Evidence from the supplied project

- The source spreadsheet contains the fields Employee ID, Name, Email, Department and Location.
- The ServiceNow Load Data screen shows the Employee Import [u_employee_import] import set.
- The Employee Tests list shows target employee records.
- The Reports and Employee Analytics Dashboard screens show reporting on department, location and employee records.
- The displayed Transform History run reports 20 total records, 0 inserts, 0 updates, 3 ignored, 17 skipped and 0 errors.
