

Proposed Solution

Date: 30.09.2026 **Team ID:** MKU201SpreadSheets

Project Name: Import data using Transform Maps

Proposed Solution

Solution Objective

Build a repeatable ServiceNow data-import process that accepts employee spreadsheet data, stages it through an Import Set, transforms it using a Transform Map, stores it in the Employee Tests target table, and exposes the resulting data through reports and dashboards.

Proposed Solution Components

Component	Purpose	Project implementation
Spreadsheet source	Provides employee records.	Employee ID, Name, Email, Department and Location.
Load Data	Starts the import process.	Uses the existing Employee Import [u_employee_import] import set.
Import Set	Stages source records before transformation.	Employee Import.
Transform Map	Maps source fields to target fields.	Transforms employee data for the target table.
Employee Tests	Stores/reviews employee records.	Target table shown in the supplied list/report screens.
Reports	Provides tabular and grouped views.	Employees by Department, Employees by Location and Employee List Report.
Employee Analytics Dashboard	Provides visual analysis.	Department pie chart, location chart and employee list.

Proposed End-to-End Process

- Prepare the employee spreadsheet using the expected columns.
- Upload the file through ServiceNow Load Data.
- Stage the source records in Employee Import.
- Run the Transform Map to map the source data into Employee Tests.
- Review the target records and transform execution results.
- Use reports and the dashboard to analyze the imported employee data.

Expected Outcome

A repeatable import workflow in which employee spreadsheet data can be loaded, transformed, validated and presented in ServiceNow with execution results available through Transform History.
