

Solution Architecture

Date: 30.09.2026 **Team ID:** MKU201SpreadSheets
Project Name: Import data using Transform Maps

Solution Architecture

Logical Architecture

Operational Monitoring

Area	ServiceNow component	Purpose
Import execution	Transform History	Shows run status, total records, inserts, updates, ignored, skipped and errors.
Record validation	Employee Tests list	Allows review/filtering of target employee records.
Analytics	Reports / Dashboard	Shows department, location and employee-list information.

Architecture Notes

- The architecture is based only on components visible or explicitly identified in the supplied project material.
- The screenshots do not expose the exact field-level Transform Map configuration; therefore the mapping is represented at the logical level rather than claiming specific configuration details that are not visible.
- The displayed dashboard contains 48 employee records, while the shown Transform History execution contains 20 total records. These are treated as separate displayed states/runs.
