

Customer Journey Map

Date: 30.09.2026 **Team ID:** MKU201SpreadSheets

Project Name: Import data using Transform Maps

Customer Journey Overview

Journey stage	Customer/user action	Touchpoint	Experience / need	Project response
1. Prepare data	Maintains employee records in a spreadsheet.	Spreadsheet	Data should be organized with Employee ID, Name, Email, Department and Location.	Use the spreadsheet as the import source.
2. Start import	Selects the import process and provides the source file.	ServiceNow Load Data	Needs a clear upload/import step.	Load Data uses the Employee Import import set table.
3. Transform	Records move from the import set toward the target employee table.	Import Set + Transform Map	Needs source fields mapped to target fields.	Transform Map applies the import mapping.
4. Validate result	Checks imported employee records.	Employee Tests list	Needs to confirm records and fields are correct.	Target records can be reviewed in the Employee Tests list.
5. Analyze	Views summary information about departments and locations.	Reports / Employee Analytics Dashboard	Needs visibility into imported data.	Dashboard shows Employees by Department, Employees by Location and an Employee List Report.

Observed project evidence

- The source spreadsheet contains Employee ID, Name, Email, Department and Location fields.
- The ServiceNow Employee Tests list shows imported employee records.
- The dashboard displays 48 employee records in the shown department/location views: ServiceNow 32 (66.67%) and Salesforce 16 (33.33%); the displayed location is Hyderabad.
- The Transform History screen shows an import set named Employee Import with total 20, inserts 0, updates 0, ignored 3, skipped 17, and errors 0 for the displayed run.
