

Solution Requirements

Date: 30.09.2026 **Team ID:** MKU201SpreadSheets

Project Name: Import data using Transform Maps

Functional and Non-Functional Requirements

ID	Requirement	Type	Evidence / acceptance indication
FR-01	Accept employee source data containing Employee ID, Name, Email, Department and Location.	Functional	Fields are visible in the supplied spreadsheet screenshot.
FR-02	Provide an import set for employee data.	Functional	Load Data shows Employee Import [u_employee_import].
FR-03	Transform imported source data into the Employee Tests target table.	Functional	Project title states Transform Maps; target list is Employee Tests [u_employee_test].
FR-04	Allow users to review imported employee records.	Functional	Employee Tests list displays Employee ID, Employee Name, Department, Email and Location.
FR-05	Provide report/dashboard views for imported data.	Functional	Screens show Employees by Department, Employees by Location and Employee List Report.
FR-06	Record import execution results.	Functional	Transform History shows totals, inserts, updates, ignored, skipped and errors.
NFR-01	Maintain consistent field mapping between source and target.	Data quality	Required to preserve Employee ID, Name, Email, Department and Location.
NFR-02	Provide traceability of import execution.	Operational	Transform History provides the run and its result counts.
NFR-03	Avoid loading invalid or unintended records.	Data quality	The displayed run identifies skipped/ignored records for review.
NFR-04	Support repeatable imports using the same import structure.	Operational	Import Set + Transform Map approach supports repeated processing of similarly structured source files.

Project Data Model

Source field	Target field shown/expected	Purpose
Employee ID	Employee ID	Unique employee reference
Name	Employee Name	Employee identification
Email	Email	Employee contact information
Department	Department	Organizational classification
Location	Location	Employee location

Observed validation result

- The displayed Transform History run completed with 0 errors.
- The same run shows 20 total records, with 3 ignored and 17 skipped; therefore those records should be reviewed against the project's intended import rules before treating the run as a full-load result.
