

Project Design Phase – Project Executable Files

Date: 30.09.2026 **Team ID:** MKU201SpreadSheets

Project Name: Import data using Transform Maps

Purpose

This document identifies the executable/project artifacts used to demonstrate the Import data using Transform Maps solution. The project is primarily a ServiceNow configuration-based implementation, so the executable evidence consists of the configured import components, source data, target records, execution history, reports and dashboard rather than a standalone application executable.

Executable / Demonstration Artifacts

No.	Artifact / Component	Purpose	Execution / Demonstration
1	Employee spreadsheet	Provides source employee data with Employee ID, Name, Email, Department and Location.	Select the spreadsheet as the source for the import process.
2	Load Data	Starts the ServiceNow file-import process.	Load the spreadsheet through ServiceNow Load Data.
3	Employee Import [u_employee_import]	Provides the Import Set staging layer.	Use the existing Employee Import import set during loading.
4	Transform Map	Transforms source data toward the target employee structure.	Execute the transformation from the import set to the target.
5	Employee Tests [u_employee_test]	Provides the target employee-record view.	Open the list and review/filter the resulting records.
6	Transform History	Provides execution evidence and processing statistics.	Review total, inserts, updates, ignored, skipped and error counts.
7	Employees by Department	Provides department-level reporting.	Open the report to analyze employee distribution.
8	Employees by Location	Provides location-level reporting.	Open the report to analyze location distribution.
9	Employee List Report	Provides a tabular employee-data view.	Open the report to review employee records.
10	Employee Analytics Dashboard	Combines visual and list-based employee analysis.	Open the dashboard to demonstrate the final analytics output.

End-to-End Execution Sequence

Spreadsheet → Load Data → Employee Import [u_employee_import] → Transform Map → Employee Tests [u_employee_test] → Transform History → Reports / Employee Analytics Dashboard

Observed Execution Evidence

Metric	Observed value
Transform History total	20
Inserts	0
Updates	0
Ignored	3
Skipped	17
Errors	0
Displayed execution time	1 second

Important Scope Note

The supplied project material does not show a standalone executable file, custom application package, Script Include, Business Rule, Client Script or custom JavaScript module. Therefore this document treats the ServiceNow configuration and demonstration artifacts as the project executable evidence and does not claim unsupported code artifacts.
